

## **Medical Review Board**

### **Task 21–2: Non-Insulin Treated Diabetes Mellitus Assessment Form**

#### **I. Task Title**

Review of form for Medical Examiners on the National Registry to assess and clinically evaluate commercial motor vehicle (CMV) driver applicants with Non-Insulin Treated Diabetes Mellitus (Non-ITDM).

#### **II. Background**

FMCSA receives frequent inquiries from medical examiners regarding the physical qualification determination of non-ITDM individuals. The Non-ITDM Assessment Form is an optional tool to assist medical examiners in the clinical assessment and evaluation of non-ITDM individuals. Similar to the CMV Driver Medication Form MCSA 5895, medical examiners would use the Non-ITDM Assessment Form at their discretion to communicate with treating clinicians of non-ITDM individuals during the physical qualification examination process. The form would be completed by the non-ITDM individual's treating clinician.

#### **III. Task**

FMCSA directs the MRB to review and comment on whether the information on the proposed Non-ITDM Assessment Form would provide sufficient information concerning the treatment, control, and stability, of an individual's non-ITDM condition to assist a medical examiner in making an appropriate physical qualification determination. Please identify any areas of ambiguity as well as additional information that FMCSA should include on the form.

#### **IV. Estimated Time to Complete Task**

The MRB will provide its comments and recommendations in a written report to the Administrator prior to its fall 2021 meeting.

#### **V. FMCSA Technical Representatives**
