on our roads**

Tips for Driving in Hazardous Weather

Make your plan to keep our roads safer, no matter the weather condition

Alter your route if the road is flooded

Avoid driving through flooded roadways and alter your vehicle's route if it's unsafe.

Maintain a slower speed

It is necessary to slow down in hazardous weather. Adjust your vehicle's speed and following distance to appropriately match weather conditions, road conditions, visibility, and traffic.

Make careful wide turns

Turning requires extra care when roads are wet or icy.

Be aware of longer stopping distances

Large trucks and buses have long stopping distances, and in rain, snow, or ice, those become even longer.
