Project Overview

What is the Picture of Crashes?

Interactive, data-driven tool that provides a view to commercial motor vehicle (CMV) crashes

**Interactive,
Data-driven tool**

Uses data from multiple sources representative of time of day, geography, vehicle type, weather, and other areas

**Data from
Multiple Sources**

Tool developed in ESRI's ArcGIS, a mapping and analytics software and service where users can extract answers from data

**ArcGIS Mapping
and Analytics**

Project Overview

Picture of Crashes supports roadway safety to help us better visualize circumstances around crashes...

- Safety is the U.S. DOT's top priority
- The National Roadway Safety Strategy (NRSS) is a Department-wide adoption of the Safe System Approach that focuses on:
 - Safer people, safer roads, safer vehicles, safer speeds, and post-crash care
- FMCSA can analyze data in the tool to understand what happens before, during and around CMV crashes, and therefore identify and address safety issues

Approach and Objectives

The Picture of Crashes is ongoing and continues to evolve...

Refine Tool

Ongoing refinement of the tool to identify trends and root causes of crashes

Augment Existing data

Identify additional data sources to integrate to the tool to augment existing data

Explore Analyses

Explore how to use data and insights gathered from the tool to make data-driven analyses around large truck and bus crashes

Leverage the Tool

Understand how the DOT, FMCSA, State partners, and others could leverage the tool/data to improve safety on our roads in the future

Integrated Data Sources

Datasets are extracted from external Agency sources to augment and complement existing FMCSA data...

- Three States' data integrated into the tool: Maryland, Texas, Virginia (years 2018-2020)
- Data sources currently include:

NHTSA
National Highway
Traffic Safety
Administration
(NHTSA) crash data

MCMIS
FMCSA Motor Carrier
Management
Information System
(MCMIS) crash,
inspection and
enforcement data

FHWA HPMS
Federal Highway
Administration (FHWA)
Highway Performance
Monitoring System
(HPMS) roadway
infrastructure data

NOAA
National Oceanic and
Atmospheric
Administration
(NOAA) historical
weather data

Tool Features

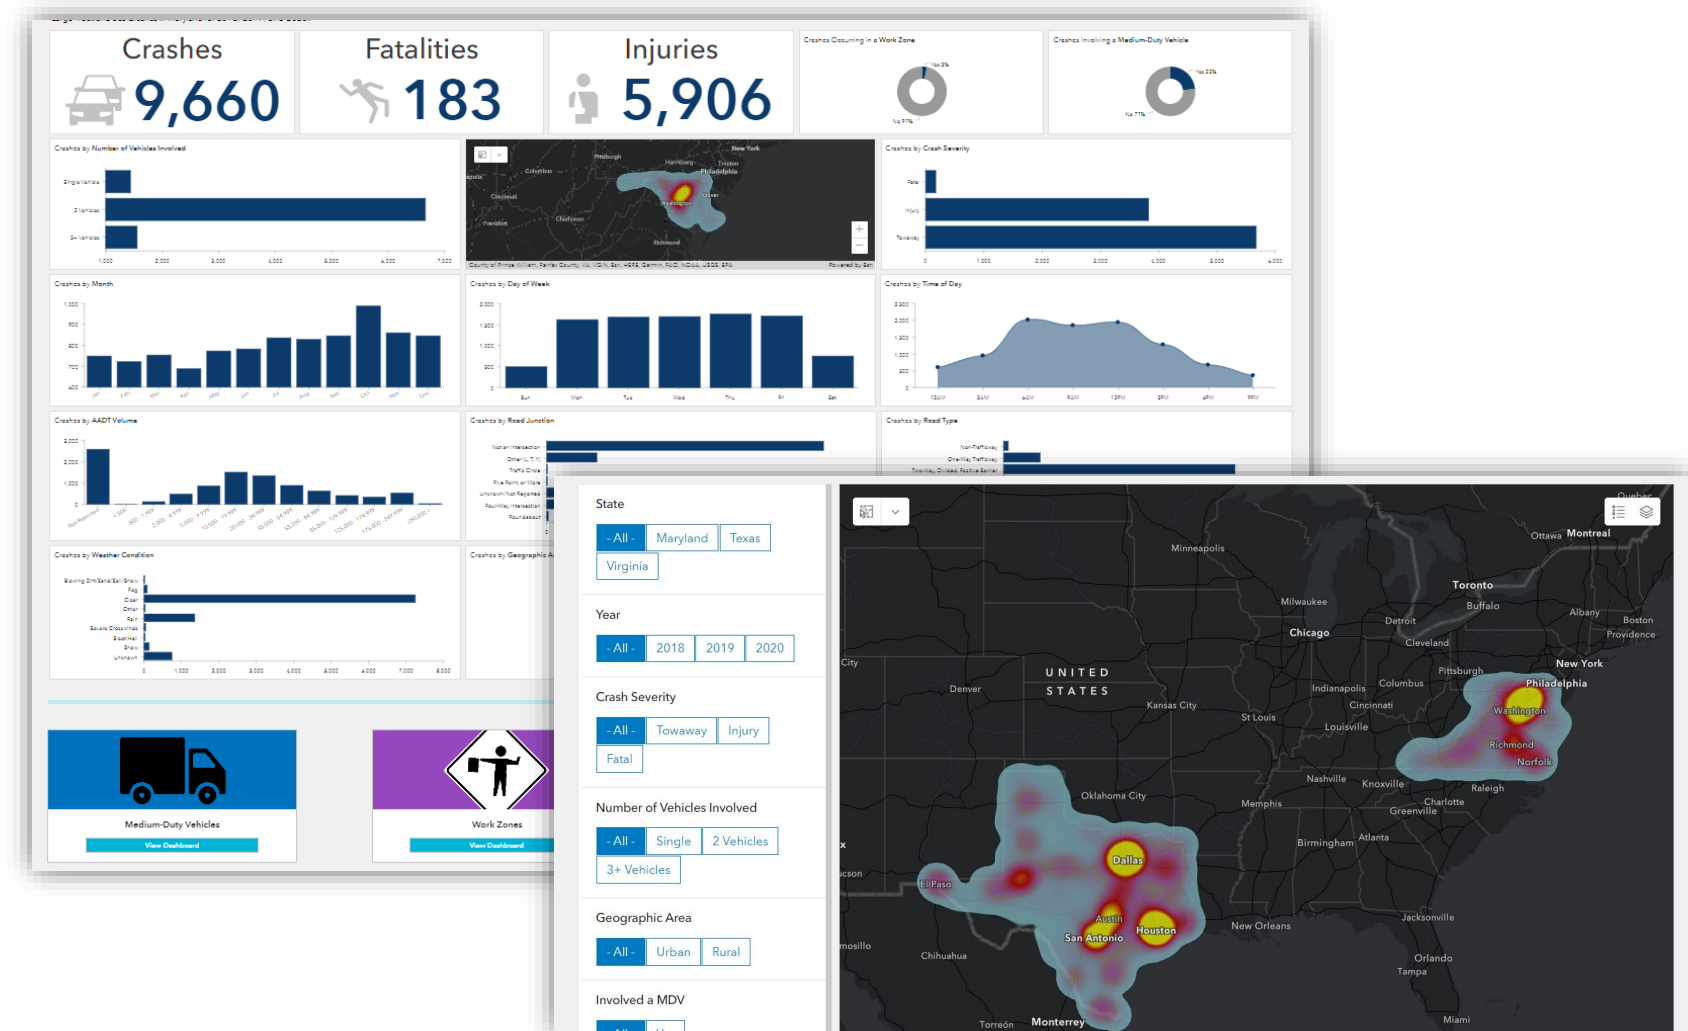

Dashboard views and filters help narrow in on subsets of large truck and bus crashes...

Interactive Dashboards:

- Medium-Duty Vehicles
- Work Zones
- Single vs. Multi-Vehicle
- Vulnerable Road Users (VRUs)

Crash Overview Data:

- Hot Spot Analysis
- Time of Day, Day of Week, Month
- # of vehicles involved
- Weather, Geographic location
- Crash type, Road type
- Road junction, Average Annual Daily Traffic (AADT) volume

Example: Work Zone Crash Dashboard

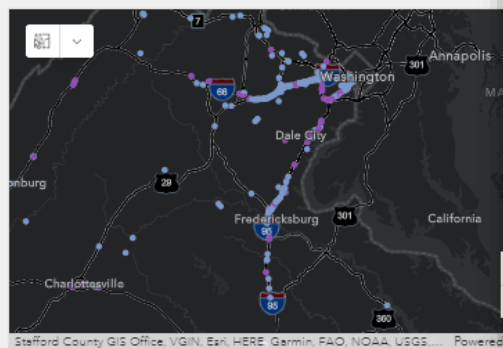

Virginia: 2018 through 2020

Work Zone Crashes

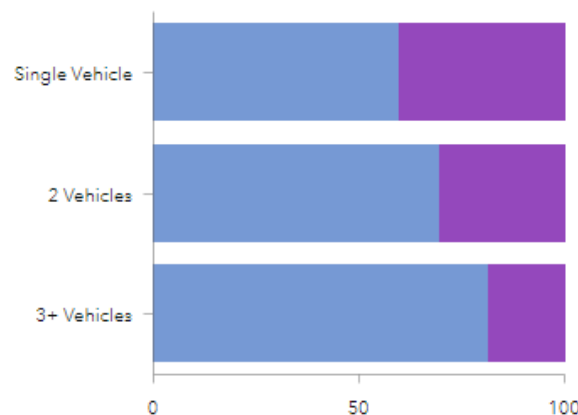

723

7% of all Crashes

Work Zone Crashes by Number of Vehicles Involved and Time of Day

Work Zone Crashes by Time of Day

Work Zone Crashes by Day of Week and Time of Day

Work Zone Crashes by Crash Severity

Work Zone Crashes by Collision Type

Work Zone Crashes by VRU Type

Work Zone Crashes by Road Junction

Work Zone Crashes by Road Type

Work Zone Crashes by Roadway Functional Class

91%

Clear Conditions

8%

Rain / Sleet / Snow

0%

Windy / Foggy

0%

Other / NA

Example: Work Zone Crash Dashboard

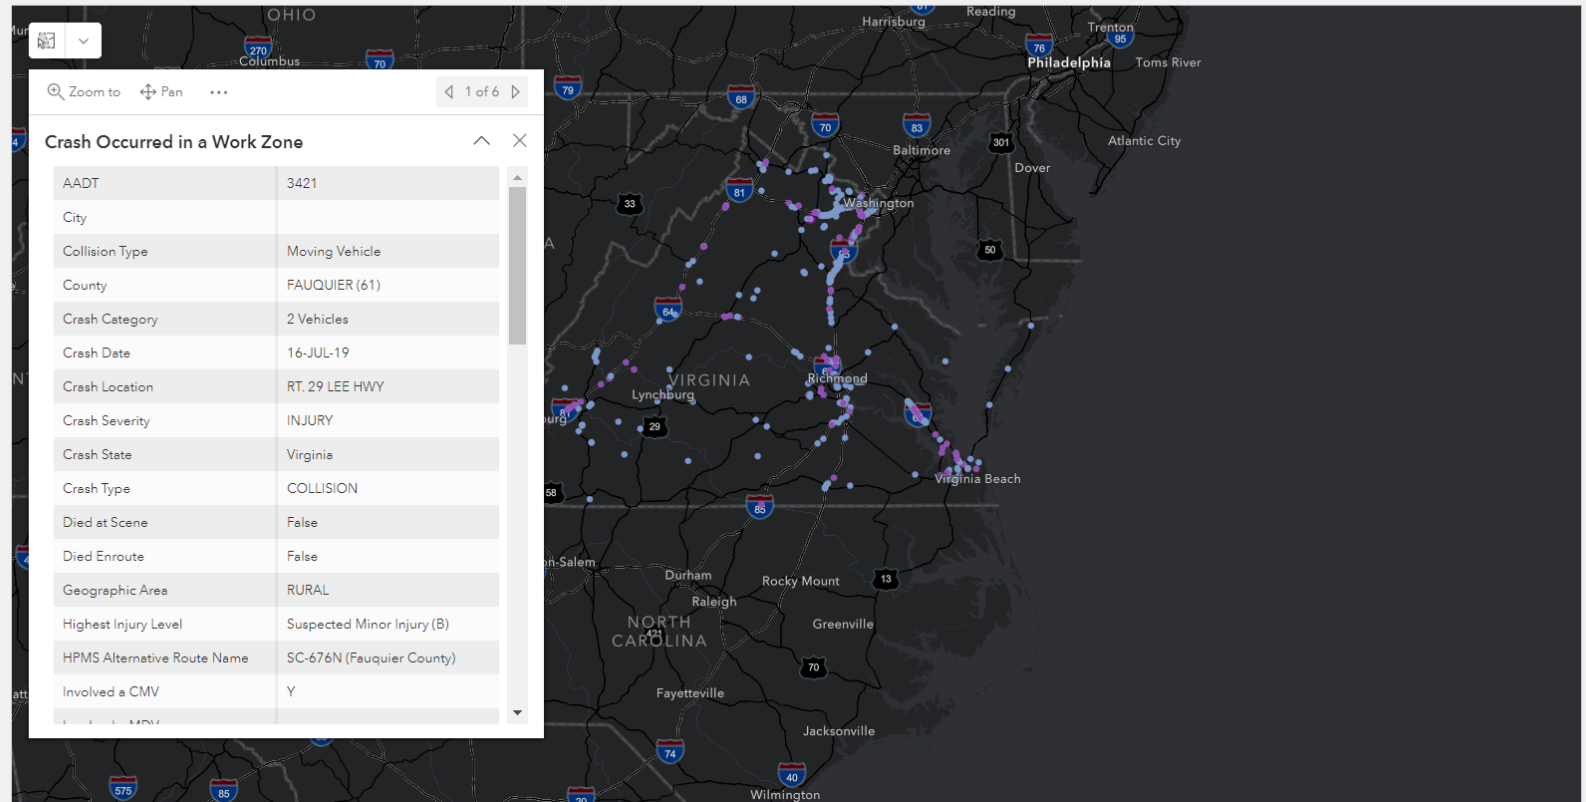

Virginia: 2018 through 2020 Zooming In

“Zooming In” on Individual Crashes:

- Data will denote collision type, county, category, type, date, severity, etc.
- The different colors of the dots (blue, purple) indicate daytime and nighttime crashes.

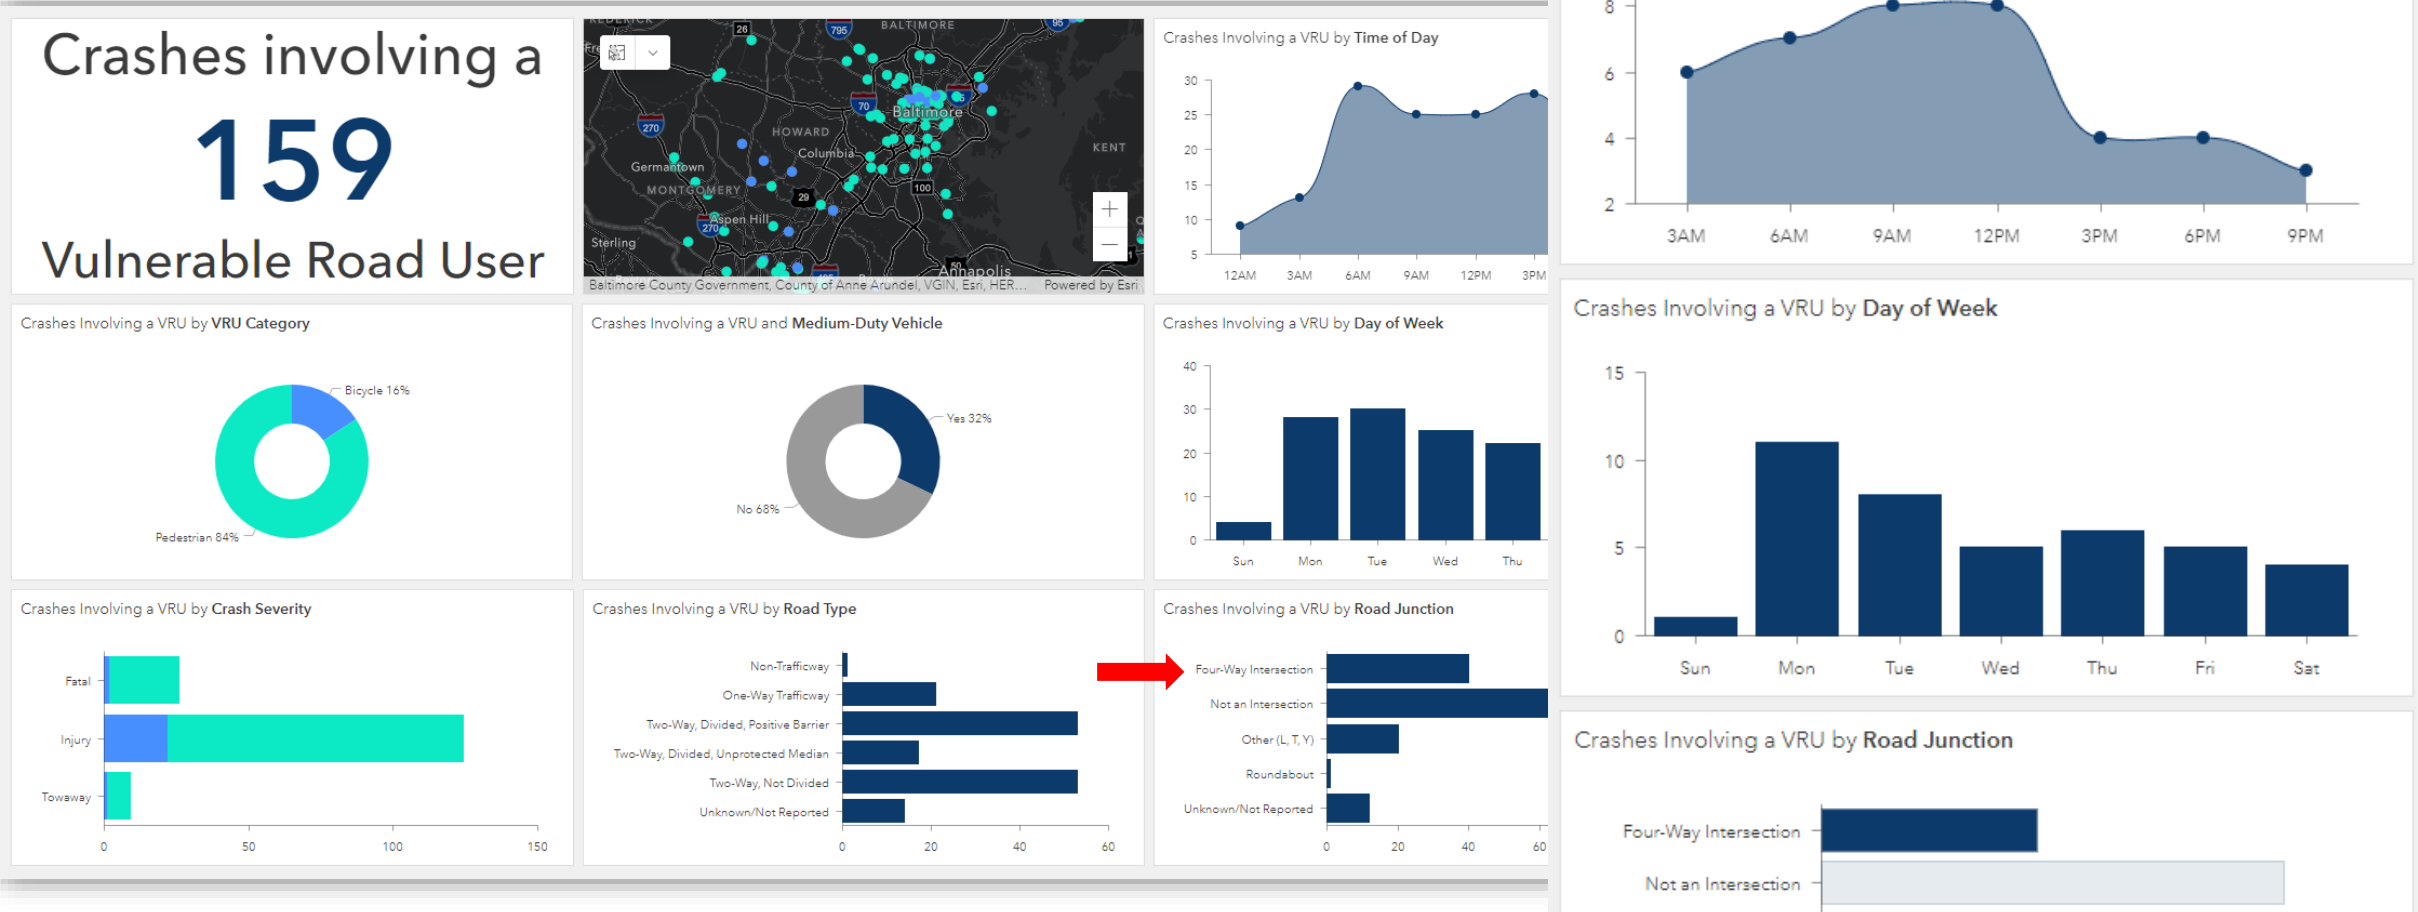

WORK ZONE CRASHES

Large trucks are overrepresented in work zone crashes, making up nearly one-third of fatal work zone crashes nationwide. This dashboard explores work zone crashes that involved large trucks and buses in Virginia in 2018, 2019, and 2020.

Example: Vulnerable Road Users (VRUs) Dashboard

Maryland: 2018 through 2020
