SAFETY RESEARCH FORUM

VIRTUAL EVENT

Advanced Technology Division

- **Purpose:** to identify, develop, test, and deploy innovative technologies to improve the safety and security of commercial motor vehicles.
- **Priority Program Areas:**
 - Automated Driver Systems Research – Automated CMV Evaluation (ACE) Program
 - Advanced Driver Assistance Systems (ADAS) – “Tech-Celerate Now”
 - Roadside Enforcement Technologies
 - Innovative Technology Deployment (ITD) Grants

Selected Advanced Technology Division Projects

- **Automated CMV Evaluation (ACE) Program: Inspections, Demonstrations, and Evaluations**
 - Demonstrate, test, and evaluate ADS-equipped CMV inspection procedures, methods, and technologies
 - Assess how automated vehicles interact with emergency response vehicles and work zones to support the development of best practices.
- **ADAS CMV Consumer Testing**
 - Conducting testing of commercially available CMV ADAS to share results with trucking fleets and CMV drivers through the TechCelerate Now program in collaboration with OEMs and NHTSA
- **Vehicle Operations & Maintenance Safety Projects**
 - Researching truck and trailer safety stability issues and conducting a longitudinal study of CMV intelligent tires to assess contributing impacts on CMV crashes
- **Human-ADS Team Driving Simulation Testing**
 - Conducting experiments involving CMV drivers in a truck simulator to gather data on driver fatigue during novel human-ADS team driving scenarios to inform future policies and regulatory activities.
