

FMCSA Launching New Registration System in 2025

The start of a new, safer journey with FMCSA.

What is the new registration system?

The Federal Motor Carrier Safety Administration (FMCSA) is developing a new registration system to streamline the registration process for new applicants and the management of the registration life cycle for existing registered entities.

The platform will be a one-stop-shop that includes user roles for individuals and businesses that support registered entities.

Here's what's coming down the road.

FMCSA will begin rolling out the new system in phases beginning in 2025.

Throughout the development of the system, FMCSA has sought input from stakeholders and partners. Stakeholder feedback will continue to be collected and will help inform features coming in future releases.

Modernizing FMCSA Registration

FMCSA's goal with the launch of the new registration system is to simplify the registration process, streamline identification, improve the user experience, and incorporate enhanced verification tools.

Simplified Registration Process

- Consolidation of FMCSA forms into a single online system.
- Easily accessible account pages to view and manage user and business information, preferences, and activity.
- Enhanced user roles to engage the right people at the right time.

Streamlined Registration Identification

- All regulated entities will continue to be identified by a USDOT Number.
- Suffixes at the end of the USDOT Number will indicate each type of registration granted. These suffixes will not be a vehicle marking requirement.

Improved and Intuitive User Experience

- Enhancements will include auto-population tools, real-time data validation, smart logic, edit checks, and notifications.
- Mobile devices and tablets can be used to view and update registration information on the go—no need to wait on paper form processing.

Enhanced Verification and Fraud Reduction

- New identity verification software and user account roles will protect and control system access.
- New business verification and information edit checks will validate key information, such as principal place of business address.
- The system will support automated, secure processes for company officials and their support users, such as insurance filers, service providers, and blanket companies, to conduct business electronically.
