

Shannon,

These documents all look good to me. What I don't see are any more detailed notes of the August meeting from the working group to give background related manual inspections that goes along with the Discussion notes for the August 2 meeting page 5 inserted item (2). I think the working group and subcommittee were divided over whether or not requesting the driver to reproduce paper logs was something that should be required under the regulations or if the officer needed to be able to step up on the side of the cab and view the display. There was also discussion about a color coded screen background with the date displayed to make it easier for the officer to determine whether or not the driver was in violation. It may be helpful for the full MCSAC to have the background on the options and pros and cons of each. If you need any materials from me please let me know.

Thanks
