

Hi Shannon,

I don't have any changes to the notes taken at the meetings including updated rule as they've been distributed.

I do have a couple of comments about the MCSAC Task 11-04 Subcommittee Notes August 1-2, 2100. In the EOBR Data File Format section:

That section mentions the use of CSV for "roadside" inspection file format and XML for CMRS approaches.

While I can support this approach, I want to make sure that we know that CSV file formats can be used for both roadside and CMRS if the RESTful web services approach is used for CMRS. Using one data format simplifies the design.

Also, the use of RESTful web services is much simpler and lighter weight than traditional SOAP based web services, which also simplifies the design.

Please let me know if you have any questions for me.

Thanks,

Carleton Watkins 8-12-11
