Inspection Report Facsimile

"Inspection Report Facsimile" Explained

The Inspection Facsimile Report displays information on reports of inspections that have been matched to a user-specified carrier. An Inspection Report Facsimile consists of all such information that relates to a single reported inspection. In order for an inspection to appear in a facsimile, it must have a status of 'complete'. All of the inspections appearing in an Inspection Facsimile Report belong to one and only one carrier. In requesting a report, the user specifies this carrier by providing its USDOT number. The user may restrict the inspections displayed in the report to those of a certain date range and/or state. For those inspections covered in a report, driver names may be either exhibited or excluded. Such information must not appear in reports that are disseminated to the public. In other situations, the decision of whether or not to include driver names is up to the user.

Each Inspection Facsimile Report consists of three sections: A cover page, a report summary, and the report's inspection facsimiles.

The cover page contains a brief, general description of the data included in the report and a disclaimer about the report's contents.

The first part of a summary displays the values of the report's user-entered selection criteria. These criteria are the USDOT number of the carrier whose inspections are to be covered, the beginning and ending dates (if specified) of the inspections to be included, the code for the state (if specified) in which the included inspections are to have been conducted, and whether or not driver names are to be a part of the inspection information shown. The remainder of a report summary provides an abbreviated overview of the inspections actually displayed later in full, within the individual Inspection Report facsimiles. For inspections and archived inspections separately, a brief synopsis is included here of each inspection item for which a facsimile has been created followed by the overall number of such items for which facsimiles have been generated.

The last section of the report provides detailed information about all qualifying inspections. The blocks of information in this section relating to individual inspections represent Inspection Report facsimiles. The information shown in each facsimile is subdivided as follows:

- 1. CARRIER IDENTIFICATION:** Provides information that profiles the carrier associated with the facsimile's inspection, such as the carrier's name and address, MC identification number (ICC docket number), state id number, shipping paper number, and operation type.
- 2. INSPECTION INFORMATION:** Provides identifying and other relevant information about the facsimile's inspection, such as the state where the inspection occurred, the identification number assigned to the inspection, the inspection's date, time, and location, whether a drug interdiction search and/or arrest occurred, and, if such information was requested by the user, the name of the driver involved.
- 3. HAZARDOUS MATERIAL (HM) INFORMATION:** Provides any hazardous material information associated with the facsimile's inspection, such as whether placards were required to warn of the presence of hazardous materials as well as data on each (if any) hazardous material that made up the inspected vehicle's cargo.
- 4. VEHICLE INFORMATION:** Provides a row of information for each vehicle unit that was part of the facsimile's inspection. The items appearing in a row here include vehicle unit number and type along with the vehicle's make, license tag number, license tag state, and decal number.
- 5. VIOLATION INFORMATION:** Provides a row of information for each violation that was part of the facsimile's inspection. The values appearing in a row here include the code for the specific violation involved, whether it was an out of service (OOS) violation, any special measures (defect verification) taken to correct an OOS violation, and whether the violation pertained to the vehicle's driver, co-driver, or one of its units.
